New!

On Demand 2-Way Radio Technician Training

Our Basic 2-Way Radio course covers topics ranging from Electronic Theory and System Design to Antenna propagation. We believe this course would be beneficial for anyone looking to expand their knowledge in the 2-Way industry, from a beginner tech to seasoned vets.

This NEW On Demand training course provides the same great material as our Live On-Line 2-Way course. With the freedom to attend on your own time. Once your registration is finalized, your training materials should arrive in 1-2 weeks. Your link and password will be inside your training kit. The link will grant you access to the online video for 60 days beginning the day your training kit is delivered.

Course Modules

1-Electronic Theory

2-2-Way Radio Components

3-Tools Of The Trade

4-System Operations

5-Antennas, Towers & Sites

6-System Design

7-Safety

8-R56 Guidelines

Class Benefits

-Ability to take the course on your own time at a lower cost than our live class

-Specialized 8 module training kit containing course materials and "Tool Box" flash drive

-Modules are recorded in a multimedia training environment allowing for video of demonstrations with test equipment and device being adjusted simultaneously

-Course draws on 40+ years experience in telecommunications

-On Demand classroom saves time & money on travel

We offer a money back guarantee!

About the instructor, Dave Grant has been working in telecommunications for more than 40 years. His career started at a GE 2-Way radio shop in 1972. Grant went on to work for RCA and Motorola in the 2-Way World. In the early '80's, Dave joined US West Paging and was responsible for assets across 14 States.Along the way, he has been involved with Software Development, IP Networks, Public Safety Radio Dispatch Systems, onsite and online custom training. Dave authored this class in association with the US Forest Service.
