

Care and Feeding of Telex Radio Dispatch Systems

C-6200 Browser Configuration

Entering the Setup Mode

Setup of the C-6200 is almost entirely done using a web browser. The first step required during setup is to assign the Ethernet and Mask addresses to the C-6200. This is done through the front panel. To enter the front panel setup mode, press and hold MUTE-F16-GRP. From the front panel of the C-6200, the internal clock, Ethernet parameters, and security PIN can be set.

Setting the System Clock

Pressing PROG1 from the top-level setup menu will open the screen to set the internal Real Time Clock. PROG1 selects the Edit option that allows setting of the actual minutes and hours. PROG2 sets AM or PM., PROG3 selects 12 or 24-hour mode, PROG4 returns to the previous setup screen. The clock can also be directly setup by pressing MUTE-F16-C1. This key sequence bypasses the PIN number and the main setup screen.

Care and Feeding of Telex Radio Dispatch Systems

C-6200 Browser Configuration

Setting the PIN number

The Pin number is used to prevent unauthorized modification of operation parameters. When a PIN number is set, the C-6200 will prompt for it before allowing entry into the setup mode. The web-based setup for the C-6200 also has provision for a user password; it is the same four-digit value as the PIN number entered from this menu option. Selecting PROG3 from the main menu will cause the C-6200 to prompt for the new PIN number twice. If both are entered identically, the new PIN number will take affect.

	<p>DTMF 0-9: The DTMF digits allow entry of the specific numbers .</p> <p>DTMF A: DTMF digit A is the decimal point used in dotted quad</p> <p>PROG4: The “back” key is pressed when the dotted quad has been entered.</p> <p>PROG1: The “Clr” function clears the current entered value and starts over.</p> <p>PROG2: The “Del” function deletes the last entered number.</p> <p>Once these values have been set, the unit must be reset for them to take affect. It is now possible to connect to the C-6200 with a computer and web browser.</p>

Care and Feeding of Telex Radio Dispatch Systems

C-6200 Browser Configuration

Setting the basic IP information

As was mentioned before, all other parameters are setup by using a browser such as Netscape or Internet Explorer. Before connecting to the console with the browser, an IP address and Mask that is compatible with the users existing network must be set. See your network administrator to determine the proper values. The following keys are used to enter the IP dotted quad once PROG1 or PROG2 is pressed.

DTMF 0-9: The DTMF digits allow entry of the specific numbers

DTMF A: DTMF digit A is the decimal point used in dotted quad

PROG4: The “back” key is pressed when the dotted quad has been entered

PROG1: The “Clr” function clears the current entered value and starts over

PROG2: The “Del” function deletes the last entered number

Once these values have been set, the unit must be reset for them to take affect. It is now possible to connect to the C-6200 with a computer and web browser.

Care and Feeding of Telex Radio Dispatch Systems

C-6200 Browser Configuration

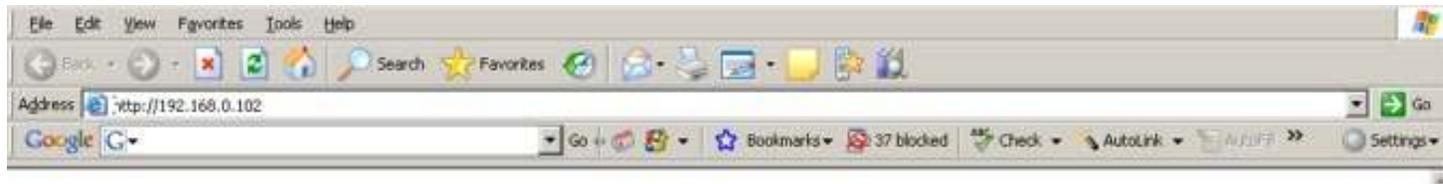

Accessing Web Browser Configuration Windows

Before connecting the C-6200 to the web browser, an IP Address compatible with an existing network must be set.

The configured IP Address is the web browser address (<http://XXX.XXX.XXX.XXX>, the XXX's refer to the values for the assigned IP Address) used to access the C-6200 Setup windows.

To **access the web setup windows**, do the following:

1. Open the **web browser** on the PC.
2. In the web address bar, enter the **IP Address** of the C-6200.

Phase 4 Design, Inc.
Dave Grant / dgrant@hostnw.net
425.402.7308

Care and Feeding of Telex Radio Dispatch Systems

C-6200 Browser Configuration

3. From the User Name drop down menu, type *admin*.
4. In the Password field, enter the appropriate **admin pin**.

If this is the first time the C-6200 has been started and a password has not been assigned to the unit, no entry is required.

5. Click **OK**.
