2 Day RoIP Training Boot Camp
Presented Online by
Phase 4 Design, Inc.

In this specialized online RoIP training course we take an in-depth look at what is required to make a TELEX RoIP system function. We cover topics such as setting jumpers and preforming alignments on your IP-223, network design and requirements, Multicast, VPN's and much much more.

We use multiple HD cameras along with desktop sharing of demo software and test equipment screens. These are live sessions with the ability to get immediate answers to your questions.

Synopsis

This course is 2 days dedicated to the design, installation, and maintenance of a Telex Radio Dispatch System.

We begin with a technical review of the Network Infrastructure and Software Components necessary to implement RoIP (Radio over IP).

We will learn design, installation and maintenance best practices, as well as advanced IP-223 and 224 radio interfacing.

This course will cover configuration of the IP-2002 and IP-1616 hard consoles as well as C-Soft programming.
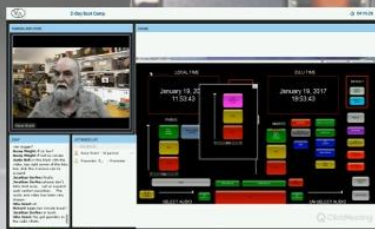

Students will be able to build a simple C-Soft Console to test different C-Soft Console configurations.

Additional advanced topics may be covered, such as Serial Controlled Radios, Console to Console private intercom, DTMF ANI signaling with the IP-223, SIP, student defined.

Each student will receive a 3-ring bound workbook of all course materials as well as a flash drive with select course material and the current release of Dave's Toolbox. Plus a custom Phase 4 IP-223 alignment tool.

Class Benefits

-Specialized training kit includes 300+ page training/ reference guide, flash drive and custom alignment tool

-Multimedia training environment allows live demonstrations of test equipment and device being adjusted

-Course draws on 40+ years experience in telecomunications

-Online classroom, saves time & money on travel

-You are welcome to rejoin any future RoIP training session at no cost (as bandwidth allows)

About the instructor, Dave Grant has been working in telecommunications for more than 40 years. His career started at a GE 2-Way radio shop in 1972. Grant went on to work for RCA and Motorola in the 2-Way World. In the early '80's, Dave joined US West Paging and was responsible for assets across 14 States.Along the way, he has been involved with Software Development, IP Networks, Public Safety Radio Dispatch Systems, onsite and online custom training.
